

# ANTI PSYCHIATRY

## TRAINING 8

### SUMMARY

Psychiatrists spend years in school learning about the human body. Somewhere during this process they must take the Hippocratic Oath in which they promise, basically, that they will do no harm. Most classes of doctors take this seriously, however psychiatrists do not. They choose to scorn GOD and follow Satan. They choose to deliberately use their knowledge to harm and kill people.

Some seek employment with the US government, known throughout the world as the Great Satan. They help the government design secret torture camps where innocent people are kidnapped, tortured, and forced to sign coerced confessions. Some are killed. Others are tortured until they eventually die.

Psychiatrists, especially groups of psychiatrists, form the equivalent of cults. In various cults, newcomers are brainwashed into believing whatever the leader wishes. The cult leader may, for example, tell his believers that there is a UFO behind a comet that will save the world. Of course, there is no UFO. The first step in "conversion", then, is to get members to believe whatever silly nonsense the leader wishes them to believe. Once enough people have been converted, they can then be used to convert new followers and punish them if they refuse to convert. In many cases, the leader has some final event planned in which all the followers will be killed. Generally, the leader is not that stupid and avoids being killed when the followers perish.

In psychiatric cults, the object is to convince the newcomers that they have some incurable disease called mental illness. It is as real as the UFO behind the comet. To convert the newcomers, drugs are forced upon them. Those who are successfully converted will agree to voluntarily take drugs for the rest of their lives. The drugs will send them to an early grave - about 25 years sooner than they would have normally died. Those who resist conversion are held and tortured until they submit. Those who refuse to submit are given increased drugs until they are killed. No one is ever voluntarily released from a psychiatric cult. Their only way out is the grave. However, by some method, people have escaped and lived on to tell the horror stories of life under the control of the cult.

It is from these "survivors" that we know the horrible truth about psychiatry. In the previous sections of

Anti Psychiatry Training, we have tried our best to warn you about the dangers of psychiatry and why it is important to avoid these people at all costs. This information may be new to you and you may wonder, "If these people are so bad, why have I not heard about this". These people are bad. However, they are also rich. Psychiatrists and the conspiracy against humanity which supports them which includes the drug companies and the fascist government, control the mainstream press and prevent truth from reaching the people. Psychiatry, which is essentially the deliberate slow destruction of human lives, is extremely profitable. These people can hire lobbyists, bribe officials and change laws so that they can do whatever they want. It is doubtful that they can be stopped by ordinary methods considering that all the hard scientific evidence which proves they harm people is routinely ignored.

If they are allowed to continue, they intend to gradually kill over 75 million people in the United States and well over one billion worldwide. However, if people would only wake up and realize the danger these Satan worshipping "doctors" pose to our world, there is hope that some kind of general awakening would put a stop to these mass murderers.

May GOD help us!
